# PLEXMAR

## SAMPLING REVEAL VISIBLE GOLD

QUEBEC CITY, **Jan.5, 2006. Plexmar Resources Inc. (TSX-V:PLE)**, is pleased to report that systematic sampling is on-going on its Bolsa del Diablo property. Some existing trenches are being enlarged and, in some areas, new trenches are being dug. All artisan workings are being mapped and sampled. Electrum and native gold has been spotted in numerous samples. Results will be published as soon as possible.

Pictures of some samples have been put up on the Company's website at <http://www.plexmar.com/bolsadelbiablo.html>

On the Angolos and Molinetes concessions, veins being mined by artisan miners are ranging from 0.10m to 3.0m in width with a 5 to 10 meters spacing. The trenches and pits are as deep as 40 metres in some areas. Heavily altered and fractured stockwork, grading up to 2 g/t Au, is present between the veins. The workings actually cover an area of 4km<sup>2</sup> on the Angolos and Molinetes concessions and keep expanding on Plexmar 100% owned adjacent concessions. Plexmar geologists are currently evaluating the best way to come up with a resource calculation.

M Martin St-Pierre is a QP for this project and has reviewed this press release.

The TSX Venture Exchange does not accept responsibility for the adequacy or accuracy of this release.
